

Docker QCM – Beginner to Master Level

Beginner Level

1. What is Docker?
 - A. A programming language
 - B. A containerization platform
 - C. A database system
 - D. A virtual machine
2. What is a Docker container?
 - A. A full operating system
 - B. A lightweight, isolated environment to run applications
 - C. A physical server
 - D. A cloud service
3. Which file is used to define how a Docker image is built?
 - A. docker.yml
 - B. docker-compose.yml
 - C. Dockerfile
 - D. image.json
4. What command is used to build a Docker image?
 - A. docker run
 - B. docker pull
 - C. docker build
 - D. docker create
5. What command lists running containers?
 - A. docker ps
 - B. docker images
 - C. docker logs
 - D. docker inspect
6. Where are Docker images stored by default?
 - A. Docker Store
 - B. GitHub
 - C. Docker Hub
 - D. Kubernetes Registry

Intermediate Level

7. What is the main difference between an image and a container?
 - A. Images are mutable, containers are immutable
 - B. Images are templates, containers are running instances
 - C. Containers are stored in Docker Hub
 - D. Images require Kubernetes
8. Which instruction defines the base image in a Dockerfile?
 - A. RUN
 - B. CMD
 - C. FROM
 - D. ENTRYPOINT
9. What does docker-compose mainly help with?
 - A. Managing Docker Swarm

- B. Building Docker images faster
 - C. Running multi-container applications
 - D. Monitoring containers
10. Which network mode allows containers to communicate using service names?
- A. Host
 - B. Bridge
 - C. None
 - D. Overlay
11. What does the EXPOSE instruction do?
- A. Opens the port on the host machine
 - B. Documents which port the container listens on
 - C. Maps a port to the host
 - D. Secures container traffic
12. Which command removes unused Docker resources?
- A. docker clean
 - B. docker rm all
 - C. docker prune
 - D. docker system prune

Master Level

13. What technology does Docker use to isolate containers?
- A. Hypervisors
 - B. Linux namespaces and cgroups
 - C. VirtualBox
 - D. Systemd
14. What is the purpose of multi-stage builds?
- A. Run containers faster
 - B. Reduce image size
 - C. Increase security
 - D. Enable container scaling
15. What happens if both CMD and ENTRYPOINT are defined?
- A. Only CMD is executed
 - B. Only ENTRYPOINT is executed
 - C. CMD provides default arguments to ENTRYPOINT
 - D. Docker throws an error
16. Which storage driver is commonly used on modern Linux systems?
- A. AUFS
 - B. OverlayFS (overlay2)
 - C. ZFS
 - D. Btrfs
17. Why should containers run as non-root users?
- A. Better performance
 - B. Required by Docker
 - C. Improved security
 - D. Easier logging
18. What is a Docker manifest mainly used for?
- A. Container networking
 - B. Multi-architecture images
 - C. Logging configuration

D. Volume management

19. Which best practice improves Docker image caching?

A. Using many RUN commands

B. Copying all files at the beginning

C. Ordering instructions from least to most frequently changed

D. Always using latest images

20. In production, which tool is commonly used for container orchestration?

A. Jenkins

B. Docker Desktop

C. Kubernetes

D. Terraform

Answers

Beginner: 1-B, 2-B, 3-C, 4-C, 5-A, 6-C

Intermediate: 7-B, 8-C, 9-C, 10-B, 11-B, 12-D

Master: 13-B, 14-B, 15-C, 16-B, 17-C, 18-B, 19-C, 20-C
