

Docker and Podman Command Equivalence

This document provides a practical mapping between common Docker commands and their Podman equivalents.

Purpose	Docker Command	Podman Command
Check version	<code>docker --version</code>	<code>podman --version</code>
Show system info	<code>docker info</code>	<code>podman info</code>
Login to registry	<code>docker login</code>	<code>podman login</code>
Logout from registry	<code>docker logout</code>	<code>podman logout</code>
Pull image	<code>docker pull nginx</code>	<code>podman pull nginx</code>
Push image	<code>docker push image:tag</code>	<code>podman push image:tag</code>
List images	<code>docker images</code>	<code>podman images</code>
Remove image	<code>docker rmi image</code>	<code>podman rmi image</code>
Build image	<code>docker build -t myimg .</code>	<code>podman build -t myimg .</code>
Tag image	<code>docker tag img:old img:new</code>	<code>podman tag img:old img:new</code>
Save image to tar	<code>docker save -o file.tar img</code>	<code>podman save -o file.tar img</code>
Load image from tar	<code>docker load -i file.tar</code>	<code>podman load -i file.tar</code>
Run container	<code>docker run ...</code>	<code>podman run ...</code>
Start container	<code>docker start ctr</code>	<code>podman start ctr</code>

Stop container	<code>docker stop ctr</code>	<code>podman stop ctr</code>
Restart container	<code>docker restart ctr</code>	<code>podman restart ctr</code>
Pause container	<code>docker pause ctr</code>	<code>podman pause ctr</code>
Unpause container	<code>docker unpause ctr</code>	<code>podman unpause ctr</code>
Remove container	<code>docker rm ctr</code>	<code>podman rm ctr</code>
List running containers	<code>docker ps</code>	<code>podman ps</code>
List all containers	<code>docker ps -a</code>	<code>podman ps -a</code>
Logs	<code>docker logs ctr</code>	<code>podman logs ctr</code>
Exec in container	<code>docker exec -it ctr bash</code>	<code>podman exec -it ctr bash</code>
Inspect container/image	<code>docker inspect name</code>	<code>podman inspect name</code>
Stats	<code>docker stats</code>	<code>podman stats</code>
Copy files	<code>docker cp src dst</code>	<code>podman cp src dst</code>
Prune unused data	<code>docker system prune</code>	<code>podman system prune</code>
View events	<code>docker events</code>	<code>podman events</code>
Create network	<code>docker network create net</code>	<code>podman network create net</code>
List networks	<code>docker network ls</code>	<code>podman network ls</code>
Remove network	<code>docker network rm net</code>	<code>podman network rm net</code>
